SAKHI · DOCTOR-READY BRIEF

Sunita Patil · 48 · Pune

Perimenopause (self-reported)
Period: 2026-09-30 to 2026-10-29 · 12 days of check-ins

MENOPAUSE RATING SCALE (MRS)

16 / 44 **Moderate**

Somatic 8/16 · Moderate

Psychological 6/16 · Moderate

Urogenital 2/12 · Moderate

Hot flushes, sweating	●●●○	Anxiety	○○○○
Heart discomfort	○○○○	Physical and mental exhaustion	●●●○
Sleep problems	●●●○	Sexual problems	○○○○
Joint and muscular discomfort	●●○○	Bladder problems	●●○○
Depressive mood	●●●○	Dryness of vagina	○○○○
Irritability	○○○○		

SYMPTOM TIMELINE (LAST 4 WEEKS)

- Hot flushes or night sweats on 12 of 30 days, mostly in the afternoon
- Poor sleep or waking at night on 8 days
- Joint or muscle pain on 3 days
- Low mood or anxiety on 1 days
- Most often noted trigger: Heat

PLEASE HELP RULE OUT

[ ] Should we check thyroid function (TSH)?
Tiredness, mood change, heat and palpitations overlap with thyroid conditions.

[ ] Should we check haemoglobin and iron levels for anaemia?
Tiredness and palpitations can have more than one cause.

[ ] Should we check vitamin D?
Joint or muscle aches and tiredness can be linked to low vitamin D.

[ ] Should we do a depression and anxiety screen (for example PHQ-9 / GAD-7)?
Low mood and anxiety are common in this phase and are worth checking properly.

[ ] Should we review what is disturbing sleep (night sweats, mood, other causes)?
Poor sleep was reported at a high level.

[ ] Should we check for a urinary infection or other bladder causes?
Bladder symptoms have several possible causes.

QUESTIONS I WOULD LIKE TO ASK

? Are these symptoms consistent with the menopause transition, or should we look for other causes?
? What options are there for the symptoms that bother me most?
? Which health checks and screenings should I schedule this year?

THE NEXT 20 YEARS · PREVENTION POINTS TO DISCUSS

Bone health
Ask whether a bone density (DEXA) scan makes sense for you, and about calcium and vitamin D.

Heart health
Ask about checking blood pressure, cholesterol and blood sugar every year.

Strength exercise
Walking plus 2 days a week of simple strength exercise helps bones and mood. Check with your doctor first if unsure.

Screening reminders
Ask when your next cervical, breast and bone screening is due.

Supportive, not diagnostic. Rule-out questions and prevention points are pending clinician review.
